Lumentum Holdings Inc.

Conflict Minerals Report

For the Calendar Year Ended December 31, 2022

Introduction

Lumentum Holdings Inc. (“we”, “us”, “our”, “Lumentum” or the “Company”) is an industry-leading provider of optical and photonic products defined by revenue and market share addressing a range of end market applications including Optical Communications and Commercial Lasers (“Lasers”) for manufacturing, inspection and life-science applications. We seek to use our core optical and photonic technology and our volume manufacturing capability to expand into attractive emerging markets that benefit from advantages that optical or photonics-based solutions provide, including 3D sensing for consumer electronics and diode light sources for a variety of automotive, consumer and industrial applications. The majority of our customers tend to be original equipment manufacturers that incorporate our products into their products which then address end-market applications. For example, we sell fiber optic components that our network equipment manufacturer customers assemble into communications networking systems, which they sell to communications service providers, hyperscale cloud operators and enterprises with their own networks. Similarly, many of our customers for our Lasers products incorporate our products into tools they produce, which are used for manufacturing processes by their customers. For 3D sensing, we sell diode lasers to manufacturers of consumer electronics products for mobile, personal computing, gaming and other applications, including to the automotive industry, who then integrate our devices within their products, for eventual resale to consumers and also into other industrial applications. Lumentum has a global marketing and sales footprint that enables us to address global market opportunities for our products. Lumentum has manufacturing capabilities and facilities in North America, South America, Asia-Pacific, and Europe, with employees engaged in research and development, administration, manufacturing, support and sales and marketing activities. For more information, please refer to Lumentum’s Annual Report on Form 10-K for the fiscal year ended July 2, 2022, filed with the U.S. Securities and Exchange Commission (“SEC”) on August 24, 2022.

This Report has been prepared in accordance with the requirements of Rule 13p-1 (the “Rule”) and Form SD promulgated under the Securities Exchange Act of 1934, as amended. The Rule requires disclosure of certain information when a company manufactures or contracts to manufacture products where the minerals specified in the Rule are necessary to the functionality or production of those products. This Report relates to the process undertaken by Lumentum to exercise due diligence on the source and chain of custody of cassiterite, columbite-tantalite (coltan), gold, wolframite, and their derivatives, which are limited to tin, tantalum and tungsten (collectively, the “Conflict Minerals”) contained in Lumentum products that were manufactured, or contracted to be manufactured, during the calendar year 2022. Third-party products that Lumentum sells but that it does not manufacture or contract to manufacture are outside the scope of this Report. This Report can be found on our website at www.lumentum.com/investors.

Executive Summary

Lumentum reviewed its supplier base to determine which suppliers were supplying Lumentum with parts or materials that were necessary to the functionality or production of the products we manufactured in calendar year 2022 and contained Conflict Minerals. We then contacted these identified suppliers, each of which provided us with a list of smelter or refiner names (collectively, “smelters”). We identified 333 unique smelter entities in Lumentum’s supply chain. Of these 333 smelters, 47 were identified as sourcing (or there was a reason to believe they may be sourcing) from the Democratic Republic of Congo (the “DRC”) or surrounding countries (collectively, the “Covered Countries”). Lumentum’s due diligence review indicates that 35 of the 47 smelters were Responsible Minerals Assurance Process (“RMAP”) conformant in 2022. The remaining 12 smelters sourcing from the Covered Countries were subject to Lumentum’s risk mitigation process described below.

Design of Due Diligence

Lumentum designed its due diligence measures to conform to the Organisation for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas: Third Edition (the “OECD Guidance”). The OECD Guidance sets forth five steps for supply chain due diligence. There is significant overlap between our reasonable country of origin inquiry (“RCOI”) efforts and our due diligence measures performed, both of which are described below.

Management Systems

Lumentum has established a management system for Conflict Minerals. This included the creation of a Conflict Minerals Team comprised of senior leaders from functional areas of Lumentum impacted by Conflict Minerals. This team was created to support supply chain due diligence and the implementation and monitoring of an effective Conflict Minerals program. We have a grievance mechanism through which our employees and suppliers can report a violation of our policies, and maintain an e-mail address conflictminerals@lumentum.com for suppliers and employees to report violations, ask questions and voice concerns. We established a system of controls over our mineral supply chain, including the RCOI and due diligence procedures described below. All relevant Conflict Minerals data is kept in our internal database system.

Reasonable Country of Origin Inquiry

Lumentum conducted a RCOI that was designed to include all suppliers and original manufacturers that supplied parts or materials that contained Conflict Minerals and were necessary to the functionality or production of the products we manufactured in calendar year 2022. We retained a third-party consulting firm to assist with the RCOI and due diligence processes. As part of our RCOI, we contacted approximately 402 suppliers and original manufacturers. Each direct supplier was asked to provide Conflict Minerals data in the Responsible Minerals Initiative (“RMI”) Conflict Minerals Reporting Template. Greater than 90% of these suppliers responded. Non-responsive suppliers and suppliers with inadequate responses were contacted multiple times. After this review, 333 smelters were identified as Conflict Minerals smelters consistent with the smelter definitions agreed upon by industry and the audit protocols published by the RMI. After performing a risk

assessment on each of the 333 smelters regarding their responses, 47 smelters either confirmed that they are sourcing Conflict Minerals from the Covered Countries, or there was reason to believe they source Conflict Minerals from the Covered Countries. This assessment was based on information directly from the smelters as well as other public information available at the time. In accordance with the Rule, Lumentum is required to exercise due diligence on the Conflict Minerals' source and chain of custody and to follow a nationally or internationally recognized due diligence framework.

Conflict Minerals Policy

Lumentum's Conflict Minerals Policy is contained within our Supplier Code of Conduct which is publicly available on our website at: <https://resource.lumentum.com/s3fs-public/literature-items/lumentum-supplier-code-conduct.pdf>.

Risk Assessment and Response

Lumentum's risk assessment plan was designed to define, identify, mitigate, and manage risks. Risks that arise are reported to the designated member of senior management. As described above under Reasonable Country of Origin Inquiry, Lumentum identified the smelters in its supply chain and directly contacted all 333 smelters and performed a risk assessment regarding responses. 47 smelters either confirmed that they are sourcing Conflict Minerals from the Covered Countries, or there was reason to believe they source Conflict Minerals from the Covered Countries. This assessment was based on information obtained directly from the smelters as well as other public information available at the time. Lumentum then compared this list to the list provided by the RMAP and for smelters that were not identified by the RMAP as conflict free, Lumentum conducted risk mitigation. 227 of the 333 smelters identified (greater than 65%) have undergone a RMAP audit. These smelters were also reviewed against publicly available information to determine if there was any reason to believe that they directly or indirectly finance or benefit armed groups in the Covered Countries.

Due Diligence Results and Ongoing Risk Mitigation Efforts

Smelters

Of the 47 smelters that either confirmed they source Conflict Minerals from the Covered Countries or Lumentum has reason to believe source Conflict Minerals from the Covered Countries, 35 smelters were recognized as RMAP Conformant at the end of 2022. Lumentum has conducted and continues to conduct risk mitigation on the remaining 12 smelters that are not RMAP conformant (African Gold Refinery, Augmont Enterprise Private Limited, Dijllah Gold Refinery FZC, Fidelity Printers and Refiners Ltd., Fujairah Gold FZC, Industrial Refiling Company, International Precious Metal Refiners, Kaloti Precious Metals, Sellem Industries Ltd, Shipur Gold Refinery Ltd., Sudan Gold Refinery, and Value Trading) to determine if they are actually used in parts purchased by Lumentum. After escalation and collaborative due diligence by Lumentum, our suppliers verified that 11 of the non RMAP Conformant smelters were not used in their supply chain for parts sold to Lumentum and the one remaining high-risk smelter (Augmont Enterprises Private Limited), which is currently RMAP Active (i.e. is a participant in the RMAP and has committed to undergo an audit or is participating in a cross-recognized certification program), is now only being reported by two suppliers. A list of the identified smelters is listed on Annex A hereto.

Because certain of Lumentum's suppliers source from one smelter that sources from the Covered Countries and the smelter was not yet conflict free certified at the end of our 2022 due diligence process, Lumentum has been unable to reach a definitive conclusion regarding its products manufactured during calendar year 2022.

Steps to be Taken to Mitigate Risk

Lumentum is committed to continuous improvement in our due diligence process to further mitigate the risk that the necessary Conflict Minerals in our products could benefit armed groups in the Covered Countries. As part of our efforts to mitigate this risk, new or renewed supplier contracts require suppliers to provide information that will allow us to evaluate their Conflict Minerals status. Additionally, we are continuing to engage with and educate our suppliers to increase supplier response rates and improve the timeliness, accuracy and comprehensiveness of the supplier survey responses we receive. We are also continuing to work with our suppliers to encourage them to source from certified smelters when sourcing material from the Covered Countries.

Additional Risk Factors

The statements included in this Conflict Minerals Report are based on the RCOI process and due diligence performed in good faith by Lumentum. These statements are based on the information available at the time. A number of factors could introduce errors or otherwise affect our determinations regarding the status of our supply chain with respect to Conflict Minerals. These factors include, but are not limited to: (i) gaps in supplier or smelter data, (ii) errors or omissions by suppliers or smelters, (iii) uncertainty or varied interpretations of the disclosure requirements described in the SEC final rules, (iv) all instances of conflict minerals necessary to the functionality or manufacturing of our products may not have been reported correctly by our suppliers, (v) many suppliers and smelters are unfamiliar with the diligence process and information required to be provided due to this new regulation, which could lead to inaccurate responses, (vi) timeliness of data received from our suppliers, (vii) information that is in the public domain may not be discovered despite having conducted a reasonable search, (viii) there may be errors in publicly available information, (ix) language barriers or errors in translation could lead to inaccurate information, (x) there could be oversights or errors in conflict free smelter audits, (xi) materials sourced from the Covered Countries could inaccurately be declared secondary materials, (xii) illegally tagged Conflict Minerals could be introduced into our supply chain without our knowledge or the knowledge of our suppliers, (xiii) difficulties obtaining information from companies that are no longer in business and (xiv) smuggling of Conflict Minerals outside the Covered Countries may make identification of their origin more difficult. This Specialized Disclosure Report on Form SD contains forward looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. These statements include any plans or intentions to improve the number and quality of supplier and smelter response rates and steps we intend to take to mitigate risk in our supply chain. These forward-looking statements involve risks and uncertainties that could cause actual results to differ materially from those projected. In particular, Lumentum's actions and the results of those actions may be affected by: (a) changes in global regulations related to the extraction of and disclosure obligations related to Conflict Minerals; (b) the ability of our direct suppliers and smelters to provide accurate information in response to our requests; (c) the availability of alternate sources of

materials necessary to the functionality or production of our products on commercially reasonable terms or at all; (d) the ability of certified smelters to meet demand for raw materials; and (e) limits on our ability to unilaterally influence supplier behavior. These forward-looking statements are made as of the date hereof and Lumentum assumes no obligation to update such statements.

Smelters and Refineries

Below is a list of the smelters reported to Lumentum as likely in Lumentum's supply chain as of December 31, 2022.

Metal	Smelter
Gold	8853 S.p.A.
Gold	Abington Reldan Metals, LLC

47 of the smelters above declared to be sourcing, or there was reason to believe they may be sourcing, from the Covered Countries. Under the Rule, the requirement is to identify whether or not a smelter is sourcing from the Covered Countries, and there is no requirement to identify the specific Covered Country by the smelter. Given the limitation on the specificity of the smelters' disclosures, the identified Covered Countries are the DRC, Rwanda, Burundi, Tanzania, and Uganda.
